

ATTENTION ADVISOR!
COPY AND DISTRIBUTE PAGES 17, 18, 19, 20
TO EACH PARTICIPANT AND THEIR PARENT(S) or GUARDIAN(S)

RISK ADVISORY

The Health Lodge Task Force will meet at the conclusion of the 2004 summer season and review all health information. Any changes will be included in the *2005 Health & Medical Record* that will be mailed to you in the fall and will apply to all participants for 2005.

Philmont has an excellent health and safety record with over 750,000 adults and young people having attended over the last 65 years. Philmont strives to minimize risks to participants and advisors by emphasizing proper safety precautions. Most participants in Philmont programs do not experience injuries because they are prepared, are conscious of risks, and take safety precautions. If you decide to attend Philmont, you should be physically fit, have proper clothing and equipment, be willing to follow instructions and work as a team with your crew and take responsibility for your own health and safety. For further information please thoroughly read the *Guidebook to Adventure* which will be mailed in mid-March. Like other wilderness areas, Philmont is not risk free and you should be prepared to listen to safety instructions carefully, follow directions and take appropriate steps to safeguard yourself and others.

Parents, guardians and potential participants in Philmont programs are advised that journeying to and from Philmont, and one's stay at Philmont, can involve exposure to accident, illness, and/or injury associated with a high elevation, physically demanding, high adventure program in a remote mountainous area. Campers may be exposed to occasional severe weather conditions such as lightning, hail, flash floods and heat. Other potential problems include: injuries from tripping and falling, motor vehicle accidents, worsening of underlying medical conditions such as diabetes or asthma, heart attacks, heat exhaustion and falls from horses.

Philmont's trails are steep and rocky. Wild animals such as bears, rattlesnakes and mountain lions are native and usually present little danger if proper precautions are taken. Please refer to the *Guidebook to Adventure*, speak with previous Philmont participants, or call Philmont for further information concerning risks and measures which can be taken to avoid accidents.

Philmont has staff trained in first aid, CPR and accident prevention, and is prepared to assist in recognizing, reacting, and responding to accidents, injuries and illnesses. Each crew is also required to have at least one member trained in first aid and CPR. Medical and search and rescue services are provided by Philmont in response to an accident or emergency, however, response times can be affected by location, weather or other emergencies and could be delayed six (6) or more hours.

THE PHILMONT TREK EXPERIENCE

A Philmont trek is physically, mentally and emotionally demanding. Each person will carry a 35 to 50 lb. pack while hiking 5 to 12 miles per day in an isolated mountain wilderness, ranging from 6,500 to 12,500 feet in elevation. Climatic conditions include temperatures from 30 to 90 degrees F, low humidity (10-30%) and frequent, sometimes severe, afternoon thunderstorms. Activities include horseback riding, rock climbing and rappelling, challenge events, pole climbing, blackpowder shooting, 12 gauge trap shooting, .30-06 shooting, trail building, mountain biking and other activities that may have potential for injury. Philmont strives to minimize risks to participants and advisors by emphasizing proper safety precautions. Refer to the *Guidebook to Adventure*, which will be mailed in mid-March, for specific information. Philmont staff instruct participants in safety measures to be followed. Each participant and crew is expected to follow these safety measures and to accept responsibility for the health and safety of each of its members.

RECOMMENDATIONS REGARDING CHRONIC ILLNESSES

Philmont requires that this information be shared with the parent(s) or guardian(s) and examining physician of every participant. Philmont does not have facilities for extended care or treatment, therefore, participants who cannot meet these requirements will be sent home at their expense.

CARDIAC OR CARDIOVASCULAR DISEASE

Adults who have had any of the following should undergo a thorough evaluation by a physician before considering participation at Philmont.

1. Angina (chest pain caused by blocked blood vessels or coming from the heart)
2. Myocardial infarction (heart attack)
3. Heart surgery or heart catheterization (including angioplasty to treat blocked blood vessels, balloon dilation, or stents).
4. Stroke or transient ischemic attacks (TIA's)
5. Claudication (leg pain with exercise caused by hardening of the arteries)
6. Family history of heart disease or a family member who died unexpectedly before age 50
7. Diabetes
8. Smoking and/or Excessive Weight

Youths who have congenital heart disease or acquired heart disease such as rheumatic fever, Kawasaki's disease or mitral valve prolapse should undergo thorough evaluation by a physician before considering participating at Philmont.

The altitude at Philmont and the physical exertion involved may precipitate either a heart attack or stroke in susceptible persons. Participants with a history of any of the first seven (7) conditions listed above should have a physician supervised stress test. More extensive testing (e.g. nuclear stress test) is recommended for participants who have coronary heart disease. **Even if the stress test is normal, the results of testing done at lower elevations and without the backpacks carried at Philmont do not guarantee safety.** If the test results are abnormal, the individual is advised not to participate.

HYPERTENSION (HIGH BLOOD PRESSURE)

The combination of stress and altitude appears to cause significant increase in blood pressure in some individuals attending Philmont. Occasionally hypertension reaches such a level that it is no longer safe to engage in strenuous activity. Hypertension can increase the risk of having a stroke, developing altitude sickness, or angina. **Persons coming to Philmont should have a normal blood pressure (less than 135/85).** Persons with significant hypertension (greater than 150/95) should be treated before coming to Philmont, and should continue on medications while at Philmont. **The goal of treatment should be to lower the blood pressure to normal. Persons with mild hypertension (greater than 135/85 but less than 150/95) probably require treatment as well.** It is the experience of the Philmont medical staff that such individuals often develop significant hypertension when they arrive at Philmont. Participants already on antihypertensive therapy with normal blood pressures should continue on medications. Diuretic therapy to control hypertension is not recommended because of the risks of dehydration which exist with strenuous activity at high altitude and low humidity. Each participant who is 18 years of age or older will have his or her blood pressure checked at Philmont. **Those individuals with a blood pressure consistently greater than 150/95 may be kept off the trail until the blood pressure decreases.**

INSULIN DEPENDENT DIABETES MELLITUS

Exercise and the type of food eaten affect insulin requirements. Any individual with insulin-dependent diabetes mellitus should be able to monitor personal blood glucose and to know how to adjust insulin doses based on these factors. The diabetic person also should know how to give a self injection. Both the diabetic person and one other person in the group should be able to recognize indications of excessively high blood sugar (hyperglycemia or diabetic ketoacidosis) and to recognize indications of excessively low blood sugar (hypoglycemia). The diabetic person and one other individual should know the appropriate initial responses for these conditions. It is recommended that the diabetic person and one other individual carry insulin on the trek (in case of accident) and that a third vial be kept at the Health Lodge for backup. Insulin can be carried in a small thermos which can be re-supplied with ice or cold water at most staffed camps. In addition, bring all appropriate testing equipment and supplies.

An insulin dependent diabetic who has been newly diagnosed (within last 6 months) or who has undergone a change in delivery system (e.g. insulin pump) in the last 6 months, should not attempt to participate in the strenuous activities encountered at Philmont. A diabetic person who has had frequent hospitalizations for

diabetic ketoacidosis or who has had frequent problems with hypoglycemia should not participate in a trek at Philmont until better control of the diabetes **has been achieved**. Call Philmont at 505-376-2281 to obtain permission from the chief medical officer for individuals hospitalized within the past year.

EXCESSIVE BODY WEIGHT

Any youth or advisor who exceeds the maximum weight limits on the Philmont weight chart is at extreme risk for health problems. (Refer to Page 20)

SEIZURES (EPILEPSY)

A seizure disorder or epilepsy does not exclude an individual from participating at Philmont. However, the seizure disorder should be well controlled by medications. A minimum one year seizure-free period is considered to be adequate control. Exceptions to this guideline may be considered by Philmont's chief medical officer and will be based on the specific type of seizure and the likely risks to the individual and to other members of the crew. The medical staff at the Health Lodge may place some restrictions on activities (rock-climbing, horse riding, etc.) for those individuals who are approved for participation but whose seizures are incompletely controlled.

ASTHMA, ALLERGY OR ANAPHYLAXIS

Asthma should be well-controlled before coming to Philmont. Well-controlled asthma means: 1) the use of an inhaler 0 or 1 time a day; 2) no need for nighttime treatment with a short-acting bronchodilator. Well controlled asthma may include the use of long-acting bronchodilators, inhaled steroids or oral medications such as Singulair. You must meet these guidelines in order to participate. You will not be allowed to participate if: 1) you have exercise asthma not prevented by medications; or 2) you have been hospitalized or have gone to the emergency room to treat asthma in the past 6 months; or 3) you have needed treatment with oral steroids (prednisone) in the past 6 months.

You must bring a 15 day supply of your medications **and** a spare inhaler. At least one other member of the crew should know how to recognize signs of worsening asthma or an asthma attack, and should know how to use the bronchodilator. Any person who has needed treatment for asthma in the past 3 years must carry an inhaler on the trek. If you do not bring an inhaler, you must buy an inhaler at Philmont before you will be allowed to participate.

Allergy shots may be given to persons on a maintenance dose and who have not had an anaphylactic reaction. You must bring your own medications. Philmont staff may not be able to give allergy shots while persons are on their trek.

Persons who have had an anaphylactic reaction for any cause must contact Philmont before coming. If you are allowed to participate, you will be required to have appropriate treatment with you. You and at least one other member of your crew must know how to give the treatment. If you do not bring appropriate treatment with you, you will be required to buy it at Philmont before you will be allowed to participate.

RECENT MUSCULOSKELETAL INJURIES AND ORTHOPEDIC SURGERY

Every Philmont participant will put a great deal of strain on feet, ankles, and knees. Participants who have had orthopedic surgery, including arthroscopic surgery or significant musculoskeletal injuries, within the past six (6) months, find it difficult or impossible to negotiate Philmont's steep rocky trails. To be cleared to backpack by the Philmont medical staff, individuals with significant musculoskeletal problems (including back problems) or recent orthopedic surgery must have a letter of clearance from their orthopedic surgeon or treating physician. A person with a cast on any extremity may participate only if approved by a Philmont physician. Ingrown toenails are a common problem and must be treated 30 days prior to arrival. All such problems will be reviewed by a Philmont physician to determine if participation in a trek will be permitted.

PSYCHOLOGICAL AND EMOTIONAL DIFFICULTIES

A psychological disorder does not necessarily exclude an individual from participation. Parents and advisors should be aware that a Philmont trek is not designed to assist participants to overcome psychological or emotional problems. Experience demonstrates that these problems frequently become magnified, not lessened, when a participant is subjected to the physical and mental challenges of a trek at high elevation, carrying a heavy backpack over steep, rocky trails. Any condition should be well controlled without the services of a mental health practitioner. **Under no circumstance should medication be stopped immediately prior to a Philmont trek and medication should be continued while at Philmont.** Participants requiring medication must bring an appropriate supply for the duration of the trip.

MEDICATIONS

Each participant at Philmont who has a condition requiring medication should bring an appropriate supply for the duration of the trip. The pharmacy at the Health Lodge is limited and the identical medications may not be available. In certain circumstances duplicate or even triplicate supplies of vital medications are appropriate. People with an allergy to bee, wasp or hornet sting must bring an EpiPen or equivalent with them to Philmont.

An individual with congenital or chronic medical conditions should always contact the family physician first and call Philmont at 505-376-2281 if there is a question about the advisability of participation. Philmont's chief medical officer and other medical staff of the Health Lodge reserve the right to make medical decisions regarding the participation of individuals at Philmont.

PHILMONT WEIGHT LIMITS FOR BACKPACKING & HIKING

Each participant in a Philmont trek must not exceed the maximum acceptable limit in the weight for height chart shown below. The right hand column shows the maximum acceptable weight for a person's height in order to participate in a Philmont trek. Those who fall within the limits are more likely to have an enjoyable trek and avoid incurring health risks. Every Philmont trek involves hiking with a 35-50 lb. backpack between 6,500 and 12,500 ft. elevations. Philmont recommends that participants carry a pack weighing no more than 25-30% of their body weight.

Participants 21 years and older who exceed the maximum acceptable weight limit for their height at the Philmont medical recheck, **will not** be permitted to backpack or hike at Philmont. For example, a person 5'10" cannot weigh more than 226 lbs. *The Philmont physicians will use their best professional judgment in determining participation in a Philmont trek by individuals under 21 years of age who exceed the maximum acceptable weight for height. Participants under 21 years of age are strongly encouraged to meet the weight limit for their height, and exceptions are not made automatically and the maximum allowable exception will be 20 lbs. Discussion in advance with Philmont regarding any exception to the weight limit for persons under 21 years of age is required, whether it is over or under.*

Under no circumstance will any individual over 295 lbs. be allowed to participate regardless of height or age. This limit is necessary due to limitations of rescue equipment and for the safety of Philmont personnel. The maximum weight for any participant in a Cavalcade Trek and for horse rides is 200 lbs.

This table is based on the revised Dietary Guidelines for Americans from the U.S. Dept. of Agriculture and the Dept. of Health & Human Services.

HEIGHT	WEIGHT RECOMMENDED	MAXIMUM ACCEPTANCE
5'0"	97 - 138	166
5'1"	101-143	172
5'2"	104-148	178
5'3'	107-152	183
5'4"	111-157	189
5'5"	114-162	195
5'6"	118-167	201
5'7"	121-172	207
5'8"	125-178	214
5'9"	129-185	220

HEIGHT	WEIGHT RECOMMENDED	MAXIMUM ACCEPTANCE
5'10"	132-188	226
5'11"	136-194	233
6'0"	140-199	239
6'1"	144-205	246
6'2"	148-210	252
6'3"	152-216	260
6'4"	156-222	267
6'5"	160-228	274
6'6"	164-234	281
6'7" & over	170-240	295

PHYSICAL PREPARATION FOR A PHILMONT TREK

To enjoy the Philmont experience participants must be physically prepared to carry a 35 - 50 lb. pack over steep, rocky trails at elevations ranging from 6,500 to 12,500 feet. A regular program of physical conditioning for at least three to six months prior to taking a trek is essential. A longer period is required for those unaccustomed to physical exercise.

The first step is to have each participant get a physical examination from their physicians on the 2005 Philmont Health and Medical Record provided by Philmont to each crew. We will be mail the medical forms in November 2004. Complete the health history on page 3 of form and schedule a physical exam.

Staff physicians at Philmont reserve the right to deny access to the trails to any adult or youth on the basis of the physical recheck at Philmont. All medical evaluation forms will be checked by Philmont medical staff.

Areas of concern include, but are not limited to: heart disease, seizure disorder, sickle cell anemia and hemophilia. Blood pressure with or without medication must be less than 150/95 for any participant to be permitted to hike on Philmont. If there are any doubts after the individual has had a physical examination, contact Philmont.

A program of regular aerobic exercise is highly recommended to become physically conditioned for Philmont. Plan to exercise for 30 to 60 minutes 3 to 5 times a week.

Jogging, running uphill, long flights of stairs or walking along abandoned railroad tracks, and hiking with a full pack are excellent preparation. How fast you run or how far you go is not nearly so important as regular exercise. Other aerobic exercises such as swimming, bicycling, stationery cycling and aerobic exercise classes can supplement your training. Start slowly and gradually increase the duration and intensity of your exercises. Start a journal to record your progress. If anyone has questions have them contact their family physician or exercise physiologist.

Backpacking is the best way to prepare for a Philmont trek. It is highly recommended that everyone in a Philmont crew fulfill the requirements for Backpacking Merit Badge. These include three 15 mile treks with two overnights each and one 5 day backpacking trek covering at least 30 miles. Fulfilling these requirements will enable you to enjoy a Philmont trek. The Venture Backpacking pamphlet also has excellent tips for preparing for a Philmont trek. Be Prepared!

Select a hilly area for your training. Start with a short hike and a light pack. Increase the mileage and your pack weight as your training progresses. It is important to hike often enough while carrying a pack and wearing the boots which you will use at Philmont to toughen your feet and to break in your boots.

Most of the crews that participate indicate on their evaluation forms that additional physical training by all members of their crew would have been helpful.

SUGGESTED CONDITIONING PROGRAM

<u>MONTH</u>	<u>CONDITIONING</u>
DECEMBER/ JANUARY	Complete health history on individual medical form and get parental approval (signature). Be examined by a physician or osteopath. Call attention of the physician to the note on the medical form that describes the rigors of a Philmont trek and to the box that indicates areas of medical concern. Ask the physician about any special medical needs or areas of concern. If overweight, get physician's recommendation on how to lose weight through dieting and exercise. Walk, jog in place, swim or pedal exercise bike indoors for 20 minutes or more at least 3-5 times a week. Gradually increase the length and the intensity of exercises. Purchase a pair of quality hiking boots. A pair of boots 6 to 8 inches high with sturdy soles are recommended. Wear your boots to school or work and when walking anywhere to break them in and to condition yourself.
FEBRUARY/ MARCH	When weather permits jog, run or walk outdoors. Start with 20 minute sessions and gradually increase the length and the incline or speed.

- APRIL Continue exercising. Schedule a couple of 5-10 mile day hikes. Carry a full backpack on the second hike.
- MAY Continue exercising. Schedule at least two overnight backpacking treks of 10-20 miles. Plan the second trek to cover more rugged terrain or increase the mileage.
- JUNE/JULY Continue exercising right up to the day you depart for Philmont. Come to Philmont in top physical and mental condition ready for backpacking a 35 to 50 pound pack over steep, rugged trails at high elevations (6,500 to 12,500 feet.)

SPECIAL FOOD NEEDS FOR ALLERGIC OR RELIGIOUS REASONS

Philmont trail food is, by necessity, a high-carbohydrate, high-caloric diet. The menu provides between 2,700 and 3,100 calories per person per day. It is high in wheat, milk products, sugar and corn syrup, and artificial coloring/flavoring. If an individual is allergic to some food products or requires a special diet, suitable trail food must be purchased at home and brought by that individual to Philmont.

Package each day's meals separately and write the person's name and expedition number on each package. Upon arrival at the ranch, give the food to your Ranger who will take it to Logistics. Arrangements will be made to transport it to the appropriate backcountry commissaries for your crew. There is no fee reduction for individuals who bring their own food.

Appropriate substitutions can be arranged for food served in the dining hall by speaking with the dining hall manager prior to arrival at Philmont.

Philmont asks that food substitutions be only for medical (including allergies) or religious reasons. Your cooperation is appreciated. If there is any question about food substitutions or to obtain a copy of the Philmont menu and ingredients list, please contact Philmont by phone (505-376-2281) or email (camping@philmontscout ranch.org).

KOSHER TRAIL MENU

A Kosher Trail Menu is available and is based, as much as possible, on the standard Philmont Trail Menu. This allows for a higher level of practicality, since it will permit the Jewish Scout to share the same foods in many instances as the non-Jewish ones, reducing the amount of extra food that needs to be packed into the backcountry and allowing more social interaction through shared food at meal time.

The *My Own Meal* products are used for the dinners and need only to be immersed in boiling water for 5 minutes to be ready, requiring very little clean-up afterwards. All of the meat products used in *My Own Meal* are Glatt Kosher. Philmont has kosher vessels (ie. brand new and not used) available. We recommend that Jewish Scouts either bring their own trail stove or purchase one here, so that they do not have to wait for a crew stove to boil their water and, thus, not eat at the same time as their crew members.

Some, but not all, of the products currently in use at Philmont have a U or K heksher. While they should be adequate to fulfill the kashrut requirements of most of our Jewish Scouts, if it is important for you to have heksher on all food products, you should consider bringing all food from home. Please request a menu as a guide on what to bring.

Much care has been placed on insuring the separation of meat and dairy at any given meal. For example, dried fruit has been substituted for the regular desserts in several suppers because the regular desserts contain milk or whey, and we feel it is important that the Scout have meat protein available at that point in the trek. Many dinners have been made vegetarian or cheese so that the Scout could also enjoy a dairy dessert with that meal.

When practical, we can arrange one or more food pick-ups in the backcountry so that Jewish Scouts do not have to carry all their food with them from the beginning of the trek. These can be arranged to occur at the same times and places as the regular crew food pick-ups. Your Ranger will help make these arrangements

If you have questions or concerns, please direct them in writing to the Philmont Jewish Chaplain.
